a
mean of the seven contrasts
random walk, linear in k
varying drift, ak + bk^2
Var(D_k) across replicates (t^2 ha^-2)
Increments accumulated (cycle − 1)
b
Variance of the increment (t^2 ha^-2)
Cycle
c
constant increments, 4.94
observed increment variances, 4.11
equal precision, 1
Slope / endpoint variance ratio (log scale)

Geo. mean
d
Mean late slope (t ha^-1 per cycle)
Mean endpoint contrast / 19 (t ha^-1 per cycle)
baseline
resource-matched
